

Mangling Audio is a free sound library crafted by Poztman, the winner of the first Music Making Contest on 99Sounds. This free collection of one shots and audio loops is a brilliant resource of glitches, noisy sound effects and processed sounds for your music making and sound design experimentation pleasure.

Poztman has used various databending and sound mangling techniques to create a huge variety of raw one shot samples, noisy audio loops and glitchy sound effects. The samples and loops included in Poztman's first official sample pack are the result of experimentation with various raw data sources and software tools which have been used and misused in new and exciting ways.

From experimental electronica and glitch hop to futuristic sound design and soundtrack composition, these free sounds are the perfect way to glitch up your latest audio related work and video projects.

Contents

332 stereo WAV files (24-bit, 44.1 kHz)

4 NKI patches (NI Kontakt 5)

LICENSE

These samples are the intellectual property of Poztman and they are hosted on 99Sounds with permission of the author. You are hereby granted a licence to use the included samples and loops for both non-commercial and commercial purposes in musical and video projects. You do not have the permission to redistribute the contents of this sound collection in any way. You are agreeing to these terms of use by downloading the sample pack.
